Grade 19.00 out of 25.00 (76%)

Question 1

Correct

Mark 1.00 out of 1.00

What is MVC?

- ☐ a. The Model represents the application core (for instance a list of database records)
- ☐ b. The View displays the data (the database records)
- ☐ c. The Controller handles the input (to the database records)
- ☒ d. All of the above ✓

The correct answer is: All of the above

Question 2

Correct

Mark 1.00 out of 1.00

Which database is the ADO.NET SqlConnection object designed for?

- ☐ a. Access
- ☒ b. Microsoft SQL Server ✓
- ☐ c. MySQL
- ☐ d. Oracle

The correct answer is: Microsoft SQL Server

Question 3

Not answered

Marked out of 1.00

Which method of character stream class returns the numbers of characters successfully read starting at count?

- ☐ a. int Read()
- ☐ b. int Read(char[] buffer, int index, int count)
- ☐ c. int ReadBlock(char[] buffer, int index, int count)
- ☐ d. None of the mentioned

The correct answer is: int Read(char[] buffer, int index, int count)

Question 4

Correct

Mark 1.00 out of 1.00

Which of the following assemblies can be stored in Global Assembly Cache?

- ☐ a. Private Assemblies
- ☐ b. Friend Assemblies
- ☒ c. Shared Assemblies ✓
- ☐ d. Public Assemblies

The correct answer is: Shared Assemblies

Question 5

Correct

Mark 1.00 out of 1.00

Which of the following cannot be used to declare an interface correctly?

- ☐ a. Properties
- ☐ b. Methods
- ☒ c. Structures ✓
- ☐ d. Events

The correct answer is: Structures

Question 6

Incorrect

Mark 0.00 out of 1.00

Which of the following components of the .NET framework provide an extensible set of classes that can be used by any .NET compliant programming language?

- ☐ a. Dot NET class libraries
- ☒ b. Common Language Runtime ✗
- ☐ c. Common Language Infrastructure
- ☐ d. Component Object Model

The correct answer is: Dot NET class libraries

Question 7

Incorrect

Mark 0.00 out of 1.00

Which of the following is NOT a .NET Exception class?

- ☐ a. Exception
- ☐ b. StackMemoryException
- ☒ c. DivideByZeroException ✖
- ☐ d. OutOfMemoryException

The correct answer is: StackMemoryException

Question 8

Correct

Mark 1.00 out of 1.00

Which of the following is not JIT compiler type?

- ☐ a. Pre-JIT
- ☐ b. ECONO-JIT
- ☐ c. Normal-JIT
- ☒ d. Abnormal-JIT ✔

The correct answer is: Abnormal-JIT

Question 9

Incorrect

Mark 0.00 out of 1.00

Which of the following is the root of the .NET type hierarchy?

- ☐ a. System.Object
- ☐ b. System.Type
- ☐ c. System.Base
- ☒ d. System.Parent ✖

The correct answer is: System.Object

Question 10

Correct

Mark 1.00 out of 1.00

Which of the following .NET components can be used to remove unused references from the managed heap?

- ☐ a. Common Language Infrastructure
- ☐ b. CLR
- ☒ c. Garbage Collector ✓
- ☐ d. Class Loader

The correct answer is: Garbage Collector

Question 11

Correct

Mark 1.00 out of 1.00

RedirectToAction() Method for which Status code represents?

- ☐ A. 304
- ☒ B. 302 ✓
- ☐ C. 301
- ☐ D. 300

The correct answer is: 302

Question 12

Correct

Mark 1.00 out of 1.00

Select the types of threads mentioned in the concept of multithreading?

- ☐ A. Foreground
- ☐ B. Background
- ☐ C. Only foreground
- ☒ D. Both foreground and background ✓

The correct answer is: Both foreground and background

Question 13

Correct

Mark 1.00 out of 1.00

The default timeout for SqlCommand.Command timeout property

- ☐ A. 10 Seconds
- ☐ B. 20 Seconds
- ☒ C. 30 Seconds ✓
- ☐ D. 40 Seconds

The correct answer is: 30 Seconds

Question 14

Correct

Mark 1.00 out of 1.00

The first record in a dataset has a position property of:

- ☒ A. zero ✓
- ☐ B. one
- ☐ C. any value defined by the programmer
- ☐ D. All of the above

The correct answer is: zero

Question 15

Incorrect

Mark 0.00 out of 1.00

What data type is returned when calling the ExecuteScalar method of a command object?

- ☐ A. System.Int32
- ☐ B. Object
- ☐ C. No of affected records.
- ☒ D. None of the above. ✗

The correct answer is: Object

Question 16

Incorrect

Mark 0.00 out of 1.00

Which is the best approach to assign a session in MVC?

- ☐ A. `System.Web.HttpContext.Current.Session["LoginID"] =7;`
- ☐ B. `Current.Session["LoginID"] =7;`
- ☒ C. `Session["LoginID"] =7;` ✖
- ☐ D. None

The correct answer is: `Current.Session["LoginID"] =7;`

Question 17

Correct

Mark 1.00 out of 1.00

Which of the following are the correct ways to declare a delegate for calling the function `func()` defined in the demo class given below?

```
class demo
{
    public int func(int i, Single j)
    {
        /* Add code here. */
    }
}
```

- ☐ A. `delegate d(int i, Single j);`
- ☐ B. `delegate void d(int, Single);`
- ☒ C. `delegate int d(int i, Single j);` ✔
- ☐ D. `delegate void (int i, Single j);`

The correct answer is:
`delegate int d(int i, Single j);`

Question 18

Correct

Mark 1.00 out of 1.00

You are developing a card game for F54.

The application calls a method that returns an array of integers named **employeeIds**. You define an integer variable named **employeeIdToRemove** and assign a value to it. You declare an array named **filteredEmployeeIds**.

You have the following requirements:

Remove duplicate integers from the employeeIds array.

Sort the array in order from the highest value to the lowest value.

Remove the integer value stored in the employeeIdToRemove variable from the employeeIds array.

You need to create a LINQ query to meet the requirements.

Which code segment should you use?

- ☐ A. `int[] filterEmployeeIds = employeeIds.Where(value => value != employeeIdToRemove).OrderBy(x => x).ToArray();`
- ☐ B. `int[] filterEmployeeIds = employeeIds.Where(value => value != employeeIdToRemove).OrderByDescending(x => x).ToArray();`
- ☒ C. `int[] filterEmployeeIds = employeeIds.Distinct(value => value != employeeIdToRemove).OrderByDescending(x => x).ToArray();` ✓
- ☐ D. `int[] filterEmployeeIds = employeeIds.Distinct().OrderByDescending(x => x).ToArray();`

The correct answer is:

`int[] filterEmployeeIds = employeeIds.Distinct(value => value != employeeIdToRemove).OrderByDescending(x => x).ToArray();`

Question 19

Correct

Mark 1.00 out of 1.00

The following code is used will perform _____ operation in LINQ

```
public bool IsValidUser(string userName, string passWord)
```

```
{  
    DBNameDataContext myDB = NEW DBNameDataContext();  
    List<User> users = myDB.Users.Where(u => u.Username == userName && u.Password==passWord);  
    IF(users.Count>0) {  
        RETURN TRUE;  
    }  
    RETURN FALSE;  
}
```

- ☐ A. update
- ☒ B. select ✓
- ☐ C. insert
- ☐ D. All of the Above

The correct answer is:

select

Question 20

Correct

Mark 1.00 out of 1.00

While updating, which method of the SqlCommand is best to use?

- ☐ A. ExecuteQuery
- ☐ B. ExecuteUpdate
- ☒ C. ExecuteNonQuery ✓
- ☐ D. ExecuteCommand

The correct answer is: ExecuteNonQuery

Question 21

Correct

Mark 1.00 out of 1.00

You are developing a card game for F54. The application calls a method that returns an array of integers named `employeeIds`. You define an integer variable named `employeeIdToRemove` and assign a value to it. You declare an array named `filteredEmployeeIds`.

You have the following requirements:

Remove duplicate integers from the `employeeIds` array.

Sort the array in order from the highest value to the lowest value.

Remove the integer value stored in the `employeeIdToRemove` variable from the `employeeIds` array.

You need to create a LINQ query to meet the requirements.

Which code segment should you use?

- ☐ A. `int[] filterEmployeeIds = employeeIds.Where(value => value != employeeIdToRemove).OrderBy(x => x).ToArray();`
- ☐ B. `int[] filterEmployeeIds = employeeIds.Where(value => value != employeeIdToRemove).OrderByDescending(x => x).ToArray();`
- ☒ C. `int[] filterEmployeeIds = employeeIds.Distinct(value => value != employeeIdToRemove).OrderByDescending(x => x).ToArray();` ✓
- ☐ D. `int[] filterEmployeeIds = employeeIds.Distinct().OrderByDescending(x => x).ToArray();`

The correct answer is:

`int[] filterEmployeeIds = employeeIds.Distinct(value => value != employeeIdToRemove).OrderByDescending(x => x).ToArray();`

Question 22

Correct

Mark 1.00 out of 1.00

Your company uses Visual Studio .NET as its application development platform.

You have recently finished the development of a class named ShopList using the .NET Framework.

The class will include ShopItem objects that have the public properties exhibit below:

1. Name
2. ID
3. DiscountCode

You need to enable users of the class to iterate through the ShopList collection, and to list each product's name and ID using the foreach statement. Which of the following code segments will you use to accomplish this task?

- ☒ A. `public class ShopList : IEnumerator, IEnumerable { // Class implementation }` ✓
- ☐ B. `public class ShopList : IBindingList { // Class implementation }`
- ☐ C. `public class ShopList : IDictionary { // Class implementation }`
- ☐ D. `public class ShopList : ICollection { // Class implementation }`

The correct answer is:

`public class ShopList : IEnumerator, IEnumerable { // Class implementation }`

Question 23

Correct

Mark 1.00 out of 1.00

Are both TempData/ViewData require typecasting in MVC?

- ☒ A. Both (TempData/ViewData) requires type casting to avoid null exception. ✓
- ☐ B. No, these (TempData/ViewData) does not require type casting.
- ☐ C. Both A & B
- ☐ D. None of the above

The correct answer is: Both (TempData/ViewData) requires type casting to avoid null exception.

Question 24

Correct

Mark 1.00 out of 1.00

Paybill.aspx file is used to collect customer contact information like name, address phone no and credit card details.

User can select change address option.

If user selects changes address option then changeaddress.aspx page will be called after submitting page paybill.aspx.

There isn't any user interface on changeaddress.aspx.

After processing changeaddress.aspx page, success message will be displayed on paybill.aspx.

We need to write one line of code to process changeaddress.aspx page, This line should be:

- ☐ A. `Response.redirect ("changeaddress.aspx")`
- ☐ B. `Server.transfer("changeaddress.aspx")`

- ☐ C. `Server.writefile("changeaddress.aspx")`
- ☒ D. `Server.execute("changeaddress.aspx")` ✓

The correct answer is: `Server.execute("changeaddress.aspx")`

Question 25

Correct

Mark 1.00 out of 1.00

Which is the way to render Partial View using ASP.Net MVC Razor Engine?

- ☒ A. `@Html.Partial("_PartialHeader")` ✓
- ☐ B. `@Html.PartialView("_PartialHeader")`
- ☐ C. `@Html.PartialHtml("_PartialHeader")`
- ☐ D. B and C

The correct answer is: `@Html.Partial("_PartialHeader")`
