

Managed Code :-

(C# VB.Net) GFC

- ① A code which is written to aimed to get the services of managed runtime execution.
- ② executed by manage runtime env. or managed by CLR
- ③ Provider Security to app.
- ④ Memory buffer overflow doesn't occur
- ⑤ Provides runtime service like G.C, exceptⁿ. handling. etc
- ⑥ Source code is compiled in MSIL
- ⑦ Doesn't provide low-level access to programmer
- ⑧ Performance is slightly slower, due to overhead mem. mgmt & JIT compiler?
- ⑨ Runs on any platform where CLR is installed

Un-managed Code (C, C++)

- ① Code which is written to aimed to processor arch. & depends upon computer architecture
- ② executed directly by O.S.
- ③ doesn't provide security to applⁿ
- ④ Memory buffer flow may occur
- ⑤ Doesn't provide runtime service.
- ⑥ Source code is directly compile in native languages.
- ⑦ low-level access to programmer
- ⑧ Performance is faster due to direct access to system resources & compiled machine code.
- ⑨ Runs on specific platform for which it is coded
