

✓ How does the process communicate in the shared memory model? * 1/1

- ☒ Shared memory region ✓
- ☐ Through Messages
- ☐ Both a & b
- ☐ Not Possible

✗ How do the multiple processes communicate in the Message passing technique? *0/1

- ☒ Shared memory region ✗
- ☐ Through Messages
- ☐ Both a & b
- ☐ Not Possible

Correct answer

- ☒ Through Messages

✓ Inter Process Communication is involved in _____? *

1/1

- ☐ Independent Process
- ☒ Co-operating Process
- ☐ Determined Process
- ☐ Undetermined Process

✓ A process pair requires how many links if the communication is direct? * 1/1

- ☒ One
- ☐ Two
- ☐ Three
- ☐ Four

✓ Bounded capacity and Unbounded capacity queues are referred to as____ * 1/1

☐ Programmed buffering

☒ Automatic buffering ✓

☐ User defined buffering

☐ No buffering

✓ Which of the following symbol(s) can be used to redirect the output to a file or another program? *1/1

☐ |

☐ >

☐ >>

☒ |, > and >> ✓

✓ Messages sent by a process ____ *

1/1

- ☐ have to be of a fixed size
- ☐ have to be a variable size
- ☒ can be fixed or variable sized ✓
- ☐ None

✓ In the non blocking send ____ *

1/1

- ☐ the sending process keeps sending until the message is received
- ☒ the sending process sends the message and resumes operation ✓
- ☐ the sending process keeps sending until it receives a message
- ☐ none

✓ In indirect communication between processes P and Q _____ *

1/1

- ☐ there is another process R to handle and pass on the messages between P and Q
- ☐ there is another machine between the two processes to help communication
- ☒ there is a mailbox to help communication between P and Q ✓
- ☐ none of the mentioned

✓ The Zero Capacity queue _____ *

1/1

- ☐ is referred to as a message system with buffering
- ☒ is referred to as a message system with no buffering ✓
- ☐ is referred to as a link
- ☐ none of the mentioned

✓ Which of the following two operations are provided by the IPC facility? * 1/1

- ☐ write & delete message
- ☐ delete & receive message
- ☐ send & delete message
- ☒ receive & send message ✓

✓ The link between two processes P and Q to send and receive messages is called ____ *1/1

- ☒ communication link ✓
- ☐ message-passing link
- ☐ synchronization link
- ☐ all of the mentioned

✓ A thread shares its resources(like data section, code section, open files, signals) with _____ *1/1

☐ other process similar to the one that the thread belongs to

☐ other threads that belong to similar processes

☒ other threads that belong to the same process ✓

☐ All of these

✓ If the kernel is single threaded, then any user level thread performing a blocking system call will_____ *1/1

☐ cause the entire process to run along with the other threads

☒ cause the entire process to block even if the other threads are available to run ✓

☐ cause the thread to block with the other threads running

☐ None

✓ Process synchronization can be done on _____ *

1/1

- ☐ hardware level
- ☐ software level
- ☒ both hardware and software level ✓
- ☐ none of the mentioned

✓ The register context and stacks of a thread are deallocated when the thread ____

*1/1

- ☒ terminated ✓
- ☐ blocks
- ☐ unblocks
- ☐ spawns

✓ A semaphore is a shared integer variable _____ *

1/1

- ☒ that can not drop below zero ✓
- ☐ that can not be more than zero
- ☐ that can not drop below one
- ☐ that can not be more than one

✓ Mutual exclusion can be provided by the _____ *

1/1

- ☐ mutex locks
- ☐ binary semaphores
- ☒ both mutex locks and binary semaphores ✓
- ☐ none of the mentioned

✓ When several processes access the same data concurrently and the outcome of the execution depends on the particular order in which the access takes place is called _____

*1/1

- ☐ dynamic condition
- ☒ race condition
- ☐ essential condition
- ☐ critical condition

✓ Which one of the following is a synchronization tool? *

1/1

- ☐ thread
- ☐ pipe
- ☒ semaphore
- ☐ socket

✓ Termination of the process terminates _____ *

1/1

- ☐ first thread of the process
- ☐ first two threads of the process
- ☒ all threads within the process
- ☐ no thread within the process

✓ Thread synchronization is required because _____ *

1/1

- ☐ all threads of a process share the same address space
- ☐ all threads of a process share the same global variables
- ☐ all threads of a process can share the same files
- ☒ all of the mentioned

✓ What is the idea behind thread pools? *

1/1

- ☒ a number of threads are created at process startup and placed in a pool where they sit and wait for work ✓
- ☐ when a process begins, a pool of threads is chosen from the many existing and each thread is allotted equal amount of work
- ☐ all threads in a pool distribute the task equally among themselves
- ☐ none

✓ Which of the following is not TRUE *

1/1

- ☐ Processes may send each other signals
- ☐ Kernel may send signals internally
- ☒ a field is updated in the signal table when the signal is sent ✓
- ☐ each signal is maintained by a single bit

✓ Signals are identified by _____ *

1/1

☒ signal identifiers ✓

☐ signal handlers

☐ signal actions

☐ none of the mentioned

✓ In most cases, if a process is sent a signal *
while it is executing a system call, then

1/1

☐ the system call will continue execution and the signal will be ignored completely

☐ the system call is interrupted by the signal, and the signal handler comes in

☒ the signal has no effect until the system call completes ✓

☐ none of the mentioned

✓ The parent process picks up the exit status of a child using ___ system call. *1/1

- ☒ wait ✓
- ☐ waitp
- ☐ exec
- ☐ kill

✓ If the child dies first but the entry of that child in the process table is still present, then that process is called ____ *1/1

- ☐ orphan
- ☒ zombie ✓
- ☐ termin
- ☐ daemon

✓ Which of the following system call is more powerful (in waiting mechanism) than wait system call?

*1/1

- ☐ waitp
- ☒ waitpid
- ☐ kill
- ☐ runRead

✓ Which of the following system call is used for replicating a process? *

1/1

- ☒ fork
- ☐ exec
- ☐ wait
- ☐ exit
